Dear Roger

I am a physician and surgeon at Cleveland Clinic, which is one of the largest and most prestigious hospital groups in the world, is recognized as a global leader in innovative medical technology. Many of my colleagues and I therefore very excited about the PLT Super-Oxygen technology. After research and investigation, it appears that the PLT technology has a significant potential to help alleviate a tremendous worldwide growing epidemic of Hospital Acquired Infections. This problem, and the potential solution to it, is of such magnitude that Cleveland Clinic is preparing to begin immediate trials to confirm the PLT Super-Oxygen Environmental control of superbug pathogens. If these trials confirm the results of the independent lab tests that PLT has already conducted, then the PLT Super-Oxygen products could have a substantial beneficial global impact that cannot be overstated.

Please feel free to contact me should you need additional input or have questions.

Sincerely,

A handwritten signature in cursive script that reads "Charles S. Modlin, MD".
